                                                                                                                                                                                       tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. AAC80522-080530 and AAB45119 represent sequences used in the isolation and characterisation of the genes and proteins of the capabilities.
                                                                                                                                                                                                                                                       bacteria, viruses and fungi and ocular disorders e.g. corneal infection or the polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary
                                                                                                                                                                                                                                                                                                                                         e.g. rheumatoid arthritis, nyperprovince describes e.g. cardiac arrest, of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebral ischaemia, anglogenesis, nervous cerebrovascular disorders e.g. cerebral ischaemia, anglogenesis, nervous
                                                                                                                                                                                                                                                                                                                                                                                                           fungicide; and opthalmalogical. The secreted proteins, polynucleotides antagonists and agonists may be useful in treating, preventing and/or diagnosing diseases and disorders such as autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of their activities include immunosuppressive; antiarthritic; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             alternative polypeptides encoded by the genes, and amino acid sequences to which they are homologous. The genes and proteins have activities dependent on the tissues and cells in which they are expressed. Examples of their activities include immunosuppressive, antientation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Polynucleotide sequences AAC80531-C80580 represent cDNA encoding human secreted proteins AAB45120-B45169. Sequences AAB45170-B45225 represent alternative polypeptides encoded by the genes, and amino acid sequence
                                                                                                                                                                                                                                                                                                                                     system disorders e.g. Alzheimer's disease, infections caused

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DЬ
                                                                                                                                             The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a percent of the state of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           14-JUL-1999;

                                                                                                                                                                                               AAB66912-AAB66941). The GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention a treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is the codino carriers for human GLUTX3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            rice, wheat, soybean and corn. Also describes are: (1) a chimeric gene comprising a hexose carrier protein polynucleotide operably linked to regulatory sequences; (2) a transformed host cell comprising the chimer gene; and (3) altering the level of expression of a hexose carrier protein in a host cell, comprising transforming a host cell with the chimeric gene and growing the cell under expression conditions. Hexose carrier proteins may be used to manipulate carbohydrate transport and talter whole plant carbon partitioning or to manipulate carbohydrate distribution between cellular compartments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1499
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1439

function of the proteins and their role in metabolism. The HMT and HNC proteins may be used as antigens in the production of specific antibodies, and in assays to identify modulators (agonists and antiagonists) of HMT and/or HNC protein expression and activity. The anti-HMT/HNC protein antibodies and antiagonists may also be used to downregulate protein expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of flea polypeptides in samples (e.g., by enzyme linked immunosorbent assay (BLISA)). The present sequence represents a cat flea HMT cDNA of the invention.
                                                                                                                                                                                                                                       used to produce an HMT or HNC protein according to standard recombinant DNA methodology by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The HMT and HNC nucleic acids may also be used as DNA probes in diagnostic assays (e.g., PCR) to detect and quantitate the presence of cat flea or other homologous nucleic acid sequences in samples. They may also be used to study the expression and function of the proteins and their role in metabolism. The HMT and HNC
                                                                                                                                                                                                                                                                                                                                                                                                                       nucleic acids of the invention, recombinant production of the proteins, antibodies against the proteins, a method of identifying inhibitors of the proteins, and compositions comprising the inhibitors for administration to an animal. The nucleic acids, and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with flea infestations. For example, the nucleic acids may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel cat flea (Ctenocephalides felis) nucleic acids which are expressed in hindgut and Malpighian tubule (HMT) tissue or head and nerve cord (HNC) tissue. The invention also relates to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   constructs,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 26; Page 753-754; 964pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     acids useful infestations

Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions."

                                                                                                                                                                                                                                                                                                         clone is among a rearrayed set of 15,247 clones from 11 embryo cDNA libraries (including preimplantation stage embryos from unfertilized egg to blastcocyst, embryosic part of E7.5 embryos, extraembryonic part of E7.5 embryos, extraembryonic part of E7.5 embryos, extraembryonic part of E7.5 embryos or and E12.5 female mesonephros/gonad) and one newborn ovary cDNA library. Average insert size 1.5 kb. All source libraries are cloned unidirectionally with Oligo(dr)-Not primers.
